

Event Perfekt Global Ltd

Cyber Certification Status and Mitigation Statement

Effective Date: 20 July 2025

Review Date: 20 July 2026

1. Introduction

Event Perfekt Global Ltd does not currently hold Cyber Essentials or ISO27001 certification. This is due to our operational model, which is fully cloud-based and delivered via Software-as-a-Service (SaaS) platforms. We do not host infrastructure directly, and therefore do not manage physical servers, networks, or on-premise systems that typically fall within the scope of these certifications.

Despite not holding formal certification, our cyber governance is fully aligned with the principles of Cyber Essentials, ISO27001, and the NCSC Cyber Assessment Framework (CAF). Our mitigation strategy ensures robust cyber hygiene, evaluator-safe delivery, and continuous oversight throughout the lifecycle of the Enterprise Festival.

2. Governance and Oversight

Cyber assurance is led by AJ Adesanya, Cyber Security & DPO Team Lead. AJ is a Chartered IT Professional (CITP), Certified Information Security Technician (CIST), VMware Certified Professional (VCP4/5), Cisco Certified Network Associate (CCNA), and holds a Master's degree in IT Security. He is also a member of INCOSE and the Institute of Engineering and Technology (IET). AJ's remit includes secure architecture, threat modelling, vulnerability management, incident response, and supplier assurance across all SaaS platforms and data systems.

3. SaaS Governance and Platform Security

All services are delivered via certified SaaS platforms, including:

- Each provider maintains its own cyber security protocols, including encryption, access control, breach notification procedures, and independent certification. All platforms are accessed via secure login protocols with multi-factor authentication enabled.

4. Mitigation Measures

Event Perfekt Global Ltd enforces the following controls:

- Access Control: Role-based access and MFA across all platforms, overseen by AJ Adesanya.
- Data Protection: Encryption in transit and at rest; GDPR-compliant data handling via ISO27001-aligned systems.
- Incident Response: Live cyber risk register, breach escalation protocols, and ICO reporting within 72 hours.
- Staff Training: Annual cyber hygiene training covering phishing, secure platform use, and reporting procedures.
- Supplier Assurance: All SaaS vendors are vetted for compliance, breach protocols, and audit rights.
- Consent Management: All participant data is captured via GDPR-compliant systems (e.g. Cvent), with verified consent protocols for filming, communications, and data retention.

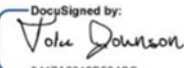

5. Certification Roadmap

We are actively reviewing the requirements for formal Cyber Essentials certification and intend to pursue accreditation in line with Growth Hub and public sector expectations. In the meantime, our cyber posture remains robust, evaluator-safe, and embedded across all delivery environments.

6. Monitoring and Review

This statement is reviewed annually or sooner if required by operational changes, platform updates, or client requirements. AJ Adesanya is responsible for monitoring effectiveness and recommending improvements. All cyber assurance activity is embedded within our PRINCE2 governance framework and reported via weekly stakeholder updates.
